

Murtaza Mustafa

Alberta, Canada | +1 647 674 8705 | murtaza1mustafa1@gmail.com | <https://www.linkedin.com/in/murtazam1>

Skill Summary:

- **Frontend & Backend:** React, Node.js, JavaScript, TypeScript, CSS, HTML
- **Databases & APIs:** SQL (MySQL), REST APIs
- **Programming Languages:** Python, Java, C++, C#
- **Tools & Practices:** Git/GitHub, Agile/Trello workflows, OpenGL, PhysX, debugging, component-based architecture
- **Strengths:** Problem-solving, teamwork under deadlines, effective communication, software testing

WORK EXPERIENCE

Teaching Assistant (Theoretical Foundations of Compsci II)

Sep 2023 – Dec 2023

University of Calgary (Calgary, Canada)

- ▶ Prepared materials for group sessions with 20 students, tailoring content to address individual learning needs and provide personalized support.
- ▶ Conducted engaging group sessions, leveraging strong communication skills to facilitate discussions and clarify complex concepts effectively.
- ▶ Demonstrated proficient time management and meticulous attention to detail in grading assignments and exams using Microsoft Excel.

Brand Ambassador

May 2023 – Aug 2023

UP Fundraising (Calgary, Canada)

- ▶ Engaged with an average of 25 individuals daily, showcasing strong interpersonal skills to effectively communicate information about specific charities, their goals, and donation opportunities.
- ▶ Consistently leveraged exceptional relationship-building skills and a persuasive demeanor to secure 5+ subscription-based donations weekly for the charities represented.

Lead Game Designer & Associate Gameplay Programmer

Aug 2024 - Present

Glass Gecko Games (Calgary, Canada)

- ▶ Lead the design and development of core game systems, ensuring they align with the project's creative vision and technical constraints.
- ▶ Contribute to coding tasks as needed to support game features and design implementation.
- ▶ Participate in sprint-based workflows using Trello, completing 5–6 design and coding tasks per sprint to support feature development and gameplay systems.

PERSONAL AND ACADEMIC PROJECTS

Well Mapping Software (React, SQL, Typescript)

Jan 2023 – Apr 2023

- ▶ Developed an SQL-based well monitoring database using MySQL and a web application to facilitate efficient well monitoring, mapping, and data interaction.
- ▶ Coordinated with a smaller team to create a pipeline of diagrams and models for the program to ensure effective prototyping of the program.
- ▶ Created a robust React frontend and Node.js backend application that tracks and visualizes key data aspects while providing data manipulation capabilities. The Node.js backend handled queries and the well database to then provide the data to the client as needed.
- ▶ Conducted thorough testing and debugging to ensure the software's reliability and functionality.

Game Engine and Development Project (C++)

Jan 2024 – Apr 2024

- ▶ Developed a custom C++ engine to support a component-based model for game development.
- ▶ Lead a team to create design documents, create a milestone-based process for meeting deadlines and constantly providing updates within meetings.
- ▶ Lead designer for the physics system (using PhysX, OpenGL) and the AI model used within the game for enemy opponents.

University Schedule Builder Overhaul Concept (React, JavaScript)

Sep 2023 – Dec 2023

- ▶ Worked within a group to build a react based schedule builder prototype. Mainly worked on the scheduling component and setting up the front-end components related to it.
- ▶ Task centered system design used and thoroughly documented as the main basis for the project.
- ▶ Effectively managed task and timelines throughout the project ensuring its timely completion and successful delivery.

EDUCATION

Bachelor of Science – Computer Science

Graduated June 2025

- ▶ **Awards:** Dean's List (2021, 2022), Continuing Undergraduate Scholarship (2022).
